Cloud
AWS, Heroku, DigitalOcean, Firebase

Experience

08/2021 – present	**Co-Creator, Software Engineer,** *Synapse* ⬈ Synapse is an open-source tool to build, deploy, and monitor a GraphQL Gateway, putting legacy APIs behind a single GraphQL endpoint. • Developed a GUI to assist in configuring various API types to the Gateway • Designed an Apollo Server plugin to log error data from GraphQL requests • Captured and stored real-time resolver latency data into MongoDB • Implemented a dashboard for monitoring request and error data • Contributed in building a pipeline to deploy Synapse to a serverless AWS infrastructure • Co-authored technical case study: – https://synapse-gateway.github.io/case-study ⬈
2019 – 2021	**Web Developer,** *Self Employed* Projects include: • ProjectHub - a project management application, built with React, Redux, Express, MongoDB, and more. • ReqBox - a RequestBin-like application built with React, Express, and MongoDB which provides a URL to collect and inspect HTTP and webhook requests. • BusBuddy - a web application that displays Metro Vancouver bus times based on a provided stop number, built with React, Axios, and Translink's API.
2015 – 2019	**Warehouse Supervisor,** *True Word Foods Inc Of Canada*
2015 – 2018	**Graphic Designer / Illustrator,** *Freelance*

Education

2019 – 2021	**Launch School,** *Software Engineering* An online curriculum utilizing mastery-based learning to enforce the fundamentals of software engineering. info: launchschool.com/employers ⬈
